

IDAN HAITNER

Computer Science Student and Software Engineer

+972-545929954 • idanhaitner@gmail.com • linkedin.com/in/idan-haitner

Education

Ben-Gurion University of the Negev

Beersheba, Israel

Bachelor of Science in Computer Science (Expected Graduation: 2028) | GPA: 85 / 100

Data Structures — 95

Introduction to Computer Science — 90

Experience

Noname Security (acquired by Akamai Technologies)

Software Engineer

07/2023 - 09/2025

- Developed automated cloud-native integrations in **Python** and **TypeScript** across AWS, Azure, and GCP, expanding API discovery and cloud traffic telemetry collection for **40+ enterprise customers**.
- Automated AWS API Gateway telemetry integrations by building a custom **Terraform provider**. This allowed customers to seamlessly manage routing configurations directly within their infrastructure-as-code pipelines, **eliminating manual setup overhead**.
- Built scalable, event-driven orchestration workflows using **Python** and **Node.js**, implementing adaptive rate-limiting that **reduced AWS API quota-exhaustion incidents to zero**.
- Owned and maintained core backend services using **NestJS**, designing scalable relational database schemas, executing ORM migrations, and developing **REST APIs** to support cloud integrations.
- Engineered a highly resilient **AWS Lambda extension** in **Go** for asynchronous telemetry forwarding, preventing customer downtime and maintaining low-latency execution while handling **thousands of events per minute**.

Unit 8200

Backend Developer

01/2021 - 07/2023

- Developed core backend services and **REST APIs** in **Python** that abstracted complex analytical computations, providing all users with seamless access to **advanced intelligence capabilities**.
- Developed and deployed a **full-stack monitoring platform** adopted across the unit, helping analysts quickly spot bottlenecks and improve investigation workflows.
- Created a unified **Python library** to standardize access to internal APIs and databases, simplifying data work for **100+ analysts**.

Nitzanim Technological Excellence Program (Part-Time)

Python Instructor

01/2026 - 07/2026

- Instructing students in **Python**, **advanced data structures**, and **OOP** fundamentals to prepare them for elite IDF technological units.
- Guiding hands-on software projects, introducing industry-standard coding practices, and conducting code reviews.

Skills

Programming Languages: Python · TypeScript · Go · Java

Backend Development: Node.js · NestJS · PostgreSQL · TypeORM · FastAPI

Cloud, DevOps & Tools: AWS · Azure · GCP · Terraform · Docker · Kubernetes (K8S) · Git
